Saqlain Islam

Hyderabad, India — +91-9435556878 — islamsaqlain@gmail.com

Summary

Computer Science Engineering graduate with a strong foundation in full-stack software development, problem solving and system design. Fast learner who enjoys turning ideas into working software and collaborating with a team. Seeking an entry-level software engineering role to grow and contribute.

Education

B.Tech in Computer Science Engineering 2022 – 2026
Malla Reddy College of Engineering and Technology, Hyderabad CGPA: 7.83 / 10
Relevant Coursework: Data Structures, OOP, DBMS, Operating Systems, Computer Networks

Projects

Autodidact: Self-Learning LLM Agent *Python, Gemini API, pytest*

- Built an **LLM agent that teaches itself** an unfamiliar web application: it designs its own practice exercises, verifies results by reading data back, and records general lessons in a persistent notebook.
- Created a simulated inventory app with **silent traps** that return wrong results without raising errors, and a hidden test shop used only for evaluation.
- Added a **leak filter** and a practice-versus-exam overlap report to prevent memorisation. 250 automated tests; resumable runs with quota-aware retries.

Sakshi: Trust Layer for ONDC Networks *Python, FastAPI, Redis, Docker, scikit-learn*

- Built a trust layer combining **Ed25519 request signing**, countersigned receipts and an **RFC 6962 Merkle transparency log** with independent auditing.
- Developed a 9-service network with a live web dashboard and attack lab: **all 17 real attacks** (replay, spoofing, key compromise, ledger rewrite) are blocked or detected.
- Verifies about **7,000 signed requests/sec** per core (p99 0.17 ms). Detected fake-review rings with graph analysis and IsolationForest (100% precision and recall on 10 held-out synthetic markets). 105 tests in CI.

AeroNode: Real-Time Autonomous Drone Framework *Python, MQTT, InfluxDB, Grafana, Docker, n8n*

- Built a **real-time engine** processing telemetry from 4 simulated drones over MQTT that responds on its own to 8 fault scenarios, including low battery, geofence breach, sensor failure, collision risk and lost link.
- Decision latency of about **0.26 ms (p95)**. Live Grafana dashboards on InfluxDB and n8n alert workflows, deployed with **Docker Compose**. 53 automated tests.

Technical Skills

Languages: Python, Java, JavaScript, SQL
Frontend: React.js, JavaScript, HTML, CSS
Backend & DevOps: FastAPI, MQTT, Redis, Docker, Git, GitHub Actions (CI)
Data & ML: scikit-learn, NetworkX, LLM APIs (Gemini), InfluxDB, Grafana, n8n
Databases: SQL, MongoDB
Core CS: Data Structures, OOP, DBMS

Additional Information

Interests: Backend Systems, Distributed Systems, Applied Security, LLM Agents
Soft Skills: Problem-solving, adaptability, analytical thinking, teamwork

Certifications

Cambridge English – C1
JobReady Employability Skills – Wadhwani Foundation
